We make it happen!

Metalworking Fluids

Turn off your machines on Friday, as usual. When you return on Monday morning, how does the coolant look? How does it smell? That bad? Like many coolants, its probably not pleasant. Life would be different if you used Hocut 795 coolant from Houghton International. Hocut 795 will look, smell, and test the same as it did on Friday. Same goes for the following Monday...and nearly every day after that. Guaranteed. Hocut 795 makes coolant issues a thing of the past.* That means no mess. No stink.

Hocut 795 eliminates coolant issues and costly change-outs

With Houghton's Hocut 795, your sump will stay clean.* Instead of babysitting your coolant, you can do what you do best — metalworking. Hocut 795 improves cooling performance, extends tool life and improves part finish. No wonder it's the most widely used coolant in the industry in more than 20 million sump gallons nationwide.

**When used at recommended concentrations.*
